

Find Out Exactly Why Your Body Is Not Changing.

Score Yourself Across 5 Areas
in 3 Minutes.

By Goran Tololeski · GT Coaching

⚠ THE PROBLEM

You Are Showing Up. But Nothing Is Changing.

You go to the gym 3 to 4 times a week. You try to eat healthy. You do your best to stay consistent.

And your body looks the same as it did 2 years ago, maybe longer!

Your energy still drops at 2pm. You avoid photos. You stand in front of the mirror before a conference and wonder, "how did I let this happen?"

You are not lazy. You are not unmotivated. You are showing up.

But here is where the problem is. You keep showing up without a system. No tracking. No feedback. No way to know if your efforts are working or just leaving you tired.

You would never run your business this way. No KPIs. No dashboard. No quarterly review. Just showing up, working hard, and hoping revenue goes up. That approach would not work in business. But it is exactly how you run your body.

This scorecard will change that. In the next few minutes you will answer 15 questions across five areas and get a score that pinpoints exactly where the problem is.

Be honest with your answers.

How To Use This Scorecard

15 Questions. 5 Sections.

- Score each question from 0 to 10
- 0 means "not even close", 10 means "completely locked in"
- Base your answers on the **last 14 days**, not your intentions

When in doubt, go lower

- If you are unsure between two numbers, pick the lower one
- The goal is to find the problem, not to pass
- You are not being graded, you are getting clarity

Be completely honest

- This is for your eyes only
- The more honest you are, the more useful your score becomes
- Your lowest section is your biggest opportunity

Your 5 Pillars (30 pts each)

- Training Structure
- Nutrition Awareness
- Sleep and Recovery
- Body Composition Awareness
- Consistency and Systems

 Total possible score: **150 points**. Your weakest section, not your strongest, is where your biggest return is hiding. Fix it first.

📌 PILLAR 1 OF 5

Section 1: Training Structure

Many executives go to the gym, but few truly train. Real training means following a program with clear direction and tracking progress over time, not just showing up and leaving sweaty.

Training smarter, not harder.

Q1 - Know Your Numbers

Do you know your current bench press, deadlift, and pull-up numbers? *Not what you used to lift. Not a rough guess. What you lifted last week.*

Weight and reps.

0 = I have no idea

10 = I log every session

___ / 10

Q2 - Measurable Progression

Has your strength gone up in the last 8 weeks? Not "I feel stronger." More weight on the bar. More reps at the same weight. Anything going up on paper.

0 = Same weights for months

10 = Clear documented progression

___ / 10

Q3 - Baseline Strength Standards

Can you bench your body weight, deadlift 1.5x, and do 6 strict pull-ups? Research classifies these as beginner-to-intermediate for adult men. This tells you where you stand.

0 = Cannot hit any of these

10 = Can hit all 3

___ / 10

📌 **Section 1 Total: ___ / 30**

📌 PILLAR 2 OF 5

Section 2: Nutrition Awareness

You do not need a strict meal plan. You need to understand what you are actually eating. Most executives think they eat 1,800 calories. The real number is often 2,800 to 3,500.

That gap is where your progress is hiding.

Q4 - Daily Protein Target

Do you know your daily protein target in grams, and do you hit it? For most men over 35, the target is 1.6 to 2g per kg of body weight. At 85kg, that is 136–170g per day. *Not "I eat a lot of protein." A number. Daily.*

0 = I do not know my target

10 = I hit it 6 or 7 days a week

___ / 10

Q5 - Go-To Meals You Enjoy

Can you name 10 meals you enjoy that support your goals? Meals you would choose on a Friday night, not meals you tolerate. If you dislike your food, you will eventually quit.

0 = No go-to meals

10 = 10+ meals I enjoy

___ / 10

Q6 - Calorie Awareness

Do you know roughly how many calories you eat on an average day? Not a guess based on vibes. An actual number based on having recently tracked or logged your food.

0 = Never tracked, no idea

10 = I know my range and hit it

___ / 10

📌 **Section 2 Total: ___ / 30**

☾ PILLAR 3 OF 5

Section 3: Sleep and Recovery

Most executives struggle here, and it impacts every other area. One night of poor sleep drops muscle protein synthesis by 18%, testosterone by 24%, and spikes cortisol by 21%.

You cannot make up for poor sleep with more training or supplements.

Q7 - 7+ Hours of Sleep

Do you consistently sleep 7 or more hours per night? Not "in bed for 7 hours." *Asleep* for 7. Most executives average 4.5 to 5.5 hours and feel normalized to being exhausted.

0 = Less than 5 hours most nights

10 = 7+ hours, protected like a board meeting

___ / 10

Q8 - Phone Out by 10pm

Is your phone out of the bedroom by 10pm? Not on silent. Not face down. *Out of the room*. If it is within reach, you will use it.

0 = I scroll until I fall asleep

10 = Phone is out every night

___ / 10

Q9 - Daily Stress Management

Do you have a daily stress management practice? Something specific: breathwork, walking without your phone, a 5-minute reset between meetings. Abdominal fat has more cortisol receptors than anywhere else on your body, stress stores fat in your midsection.

0 = Nothing, no stress management

10 = Daily practice without fail

___ / 10

☐ **Section 3 Total: ___ / 30**

 PILLAR 4 OF 5

Section 4:

Body Composition Awareness

You might weigh the same as ten years ago, but your body could look very different depending on what that weight is made of. This section checks if you understand what is actually happening, or if you are just looking at a number that tells you very little.

The scale can be misleading.

Q10 - Progress Photos & Measurements

Have you taken progress photos or body measurements in the last 4 weeks? Front, side, and back. Same lighting and time of day.

0 = Not in months or ever
10 = Every 2 weeks, consistently
__ / 10

Q11 - Body Fat Percentage

Do you know your approximate body fat percentage right now? Not a guess, an actual measurement from calipers, a DEXA scan, or a qualified professional.

0 = No idea
10 = Recent reliable measurement
__ / 10

Q12 - Tracking Beyond the Scale

Do you track anything beyond scale weight? Strength going up. Waist going down. Energy improving. Clothes fitting differently. These actually tell you if your body is changing.

0 = Scale weight or nothing
10 = Multiple metrics, reviewed regularly
__ / 10

 **Section 4 Total: __ / 30**

 PILLAR 5 OF 5

Section 5:

Consistency and Systems

This is where real transformation either happens or falls apart. It is not about how hard you work in January. It is about whether your routine holds up when work gets busy or motivation drops.

Q13 - Survives Travel and Busy Weeks

When your schedule changes, can you still complete three workouts and reach your protein goal? Or does one disruption throw off your entire routine?

0 = Any disruption kills my routine

10 = Survives travel consistently
__ / 10

Q14 - 12+ Consecutive Weeks

Have you followed the same approach for 12 or more consecutive weeks? Not 12 weeks spread out with breaks in between. 12 weeks in a row, same structured approach.

0 = Never beyond 4 to 6 weeks

10 = 12+ weeks straight
__ / 10

Q15 - Bi-Weekly Review and Adjust

Do you review your progress and adjust every 2 weeks? Photos, strength log, sleep average, measurements, and habits. If something has not improved after two check-ins, change one variable immediately.

0 = Never review or adjust

10 = Every 2 weeks, adjust on data
__ / 10

☐ **Section 5 Total: __ / 30**

310 YOUR RESULTS

Your Total Score

Section	Max
1. Training Structure	/ 30
2. Nutrition Awareness	/ 30
3. Sleep and Recovery	/ 30
4. Body Composition Awareness	/ 30
5. Consistency and Systems	/ 30
TOTAL	/ 150

- ☐ Add up all 5 sections. Then find your range on the right to see what your score means.

Below 50

Running on Guesswork

Your body is not changing because there is no system underneath it. You are putting in effort and hoping for the best. That is not a strategy.

50 to 100

Some Pieces, Major Gaps

You are doing about 60% of the work and getting only 20% of the results, because the missing 40% is what really drives change.

Above 100

Foundation Built, Precision Needed

You have a solid foundation. The difference between 100 and 150 is not working harder. It is working smarter.

What To Do With Your Score

Below 50, Running on Guesswork

1

Pick 3 compound lifts: bench press, leg press, and pull-downs. Write down what you can do today, weight and reps. That is your baseline. Every session, add something.

Calculate your protein target: body weight in kg $\times$ 1.6. That is your daily minimum in grams. Hit it tomorrow, you will feel different within a week.

Set a bedtime alarm for 10pm. Phone in another room. Aim for 7 hours. Do this for 14 nights and watch what happens.

50 to 100, Some Pieces, Major Gaps

2

Identify your weakest section. Whichever of the 5 you scored lowest on is where your biggest return is hiding. Attack the weakest link first, not the one you enjoy most.

Keep a food log for 48 hours. Photos of everything you eat or drink, coffee, olive oil, late-night snacks. The gap between what you think you eat and what you actually eat is where your progress is hiding.

Start a bi-weekly review this Sunday. Training log, photos, sleep average, measurements. If something has not improved in two check-ins, change one thing immediately.

Above 100, Foundation Built, Precision Needed

3

Get a proper body composition assessment. DEXA scan or professional calipers. Know your exact body fat, lean mass, and fat mass. At this level, you cannot afford to guess.

Rotate your rep ranges. If you have used the same range for 8+ weeks, your body has adapted. Rotate between strength (3 to 5 reps), growth (8 to 12 reps), and endurance (15 to 20 reps).

Audit your recovery honestly. What holds you back at this stage is rarely training or nutrition. It is usually stress, alcohol, and sleep quality. Review your Section 3 score.

💡 THE INSIGHT

What This Just Showed You

You now understand something most people never realize.

Where the leak is.

Many executives spend years putting in more effort on top of a broken system. More gym sessions. More diets. More supplements. More willpower. And nothing changes. Because the leak is in a pillar they never looked at.

Training scored high, sleep scored low?

Your body cannot use the work you are putting in. One bad night drops muscle protein synthesis by 18% and testosterone by 24%. You are doing the sessions. Your body is throwing them away.

Nutrition scored high, consistency scored low?

You know what to eat, but you cannot sustain it past week 4. That is not a knowledge problem. That is a systems problem.

Everything scored low?

You are not a lost cause. You are a clean slate. Clean slates respond to structure faster than anyone because every single change produces a visible result.

Your lowest section is not your weakness. It is your biggest opportunity. Fix it first.

What Happens Next

Knowing what to fix is not the same as actually fixing it.

You have your score. You know where your gaps are. Most men at this point do one of three things.

- 1 They save this PDF and never look at it again.
- 2 They try to fix everything at once, get overwhelmed, and quit after three weeks.
- 3 They work with someone who builds a system for them, keeps them accountable, and adjusts the plan based on real data.

I personally review every score that comes through.

If your score is below 75, I will reach out to you directly. We will spend 15 minutes breaking down your score, identifying your weakest pillar, and mapping the first 3 changes that will create visible progress within 14 days.
